

Massive modes on brane

Tuesday, 23 July 2024 08:30 (25)

It is known that zero modes of gravity and matter fields in a five-dimensional brane model can be localized on the brane with an infinite extra dimension. In this talk, we mainly discuss two types of massive Kaluza-Klein modes in thick brane models, resonant Kaluza-Klein modes quasilocalized on the brane and quasinormal modes. We also discuss the relation between them.
