Reflected multi-entropy and its holographic dual

Sunday, 1 December 2024 14:50 (30)

We propose a new multipartite measure for mixed states called "reflected multi-entropy" and present its holographic dual within the AdS/CFT correspondence, demonstrating its validity through calculations in AdS3/CFT2 at both zero and finite temperatures. This talk is based on arXiv:2410.08546.
