

Holographic approach to Schwinger-Keldysh effective theory

Holography offers a nice tool for studying nonequilibrium dynamics of strongly coupled systems. In this talk, I will report on our recent progress on derivation of the Schwinger-Keldysh effective actions through holographic approach. Tentatively, I will focus on a holographic critical superfluid and a holographic neutral fluid.

Presenter(s) : BU, Yan-Yan (Harbin Institute of Technology)

Session Classification : Day 2: Parallel session I
