

Strange Metal from SYK-rised Vector Model

Tuesday, 3 December 2024 17:10 (20)

In this talk, I will present a model describing the spatially random coupling between a fermi surface and a bosonic vector field. Its transport properties will be shown to illustrate if spatial randomness could be the mechanism under the strange metals.

Presenter(s) : WANG, Yi-Li (Hanyang University)

Session Classification : Day 4: Parallel session I
